

Technical Challenge - Forward Deployed Engineer

The Challenge

Hello and welcome! We're excited to invite you to take part in our assessment for the FDE role.

The Goal

This technical challenge consists of two parts

1. A take-home, hands-on technical assessment which we call the "Pokemon Challenge". This will give you the opportunity to create your own Coveo org, get your hands into the product.
2. Followed by a panel presentation, where you get to show some key Coveo stakeholders what you've built, and demonstrate the value of Coveo.

The reasoning behind this challenge is to give you an opportunity to learn more about Coveo and our product. meet some key members of the team, and see how hands on you can be while being a strategic leader for this function.

For a smooth process, please keep the following in mind:

Preparation

- We ask that you complete this part within **2 weeks time**, however the sooner the better.
- You can prepare a powerpoint, or any other form of content to help with your presentation delivery. To give the team access ahead of time, this content can be submitted before your presentation by using the **submission link** in the Technical Challenge your Talent Partner's email.

Logistics

- To avoid delay in scheduling your presentation, we will follow up with a separate email to collect your upcoming availability to get a time locked into the calendar.

If you have any questions, feel free to reach out to Will Tseng who is copied in the Technical Challenge e-mail.

Your task

As mentioned above, you will be building your own Coveo organization. You can find the instructions for the challenge [here](#).

In order to show us your skills in action, we ask that you prepare two topics to present to a Coveo panel. Details on the topics are below.

What to Prepare for the Panel Presentation:

- Plan for 25 minutes each, including Q&A.

Topic 1: This first topic is not a demo but rather a deep dive on what you built with a technical audience. What is your Coveo configuration? Why did you choose the architecture that you did? What was your decision making process?

- Feel free to augment your presentation with a few slides, docs, or other content as you see fit. Assume the audience are Coveo experts. The goal is to walk through what you built and discuss what you learned from the experience.
- **We ask that you complete the Essential & Intermediate sections. The Advanced and Bonus sections are optional but highly encouraged.**
 - If you choose not to include a section, justify your choice

Topic 2: Escalation & Recovery (Operational Leadership and Innovation)

Scenario:

A large customer's search platform is intermittently failing under peak traffic and reporting rapid business impact. Present:

- A root-cause analysis approach
- A short-term remediation plan to stabilize the customer
- Communications to executives
- A plan to prevent recurrence

What to Expect:

- Time Management: We will quickly kick off the call and hand the lead to you. We will leave it to you to manage your presentation time and transition between topics.
- Interactive Questions: Be prepared for the panel to jump in with questions to dive deeper with you during both topics.
- Additional Q&A: At the end, we'll reserve time for further questions and discussion.

Additional details & Documentation

Here are some resources that may be helpful:

- **Live customer examples** can be found [here](#).
- For inspiration, our own **Coveo Docs** site uses CRGA (Coveo Relative Generative Answering).

Good luck, and have fun!
